PROFESSIONAL SUMMARY

Data analyst with a BSc in Data Science and Business Analytics from the University of London (LSE), who developed Mazad's data function from the ground up. Experienced in building ETL pipelines in AWS Glue, centralising data in Redshift, writing the SQL behind 10+ Power BI reports, and automating the reporting management relies on. Skilled in turning complex data into clear answers to the business questions leadership asks, and ensuring the numbers behind them are accurate and reliable.

WORK EXPERIENCE

MAZAD (July 2024 - Present)

Full-Time Data Analyst (June 2026 to Present)

- Drove a strategic shift in how the company auctions by category. Analysed why a key category was underperforming, presented recommendations to stakeholders, and the restructuring that followed increased sell-through.
- Built and automated alert reports to track employee performance, improving the efficiency of performance tracking.
- Entrusted with participating in the recruitment of the data analytics interns.
- Engaged beyond the data role: selected to represent Mazad at Youth City, presenting to young people on how data helps leaders make better decisions, and active member of the company's Social Committee.

Part-Time Data Analyst (July 2025 to May 2026)

- Established the company's data analytics function, introducing Power BI and automating regular reporting on deposits, auctions, growth, employee performance, and engagement through AWS Glue pipelines and a cloud data warehouse.
- Built and monitored ETL pipelines to ensure clean, consistent and reusable data for reporting and future AI initiatives.
- Identified database limitations affecting report accuracy and put workarounds in place until a permanent fix was scoped.

Data Analytics Intern (July 2024 to September 2024)

- First to tackle data within the company, gaining a deep understanding of the business processes and existing database limitations.
- Built Power BI dashboards to monitor platform performance, giving management an analytical view of the company.

Tamkeen (July 2023 to August 2023)

Project Assessment Intern

- Performed UAT for software validation and ensured quality across project deliverables.
- Cleaned and organised data using Excel and worked with cross-functional teams to meet project deadlines.

SKILLS

Technical Skills: Power BI, PostgreSQL, AWS Glue (ETL), Amazon Redshift, Google Analytics, Mixpanel, Microsoft Excel, Power Automate

Data Domains: Financial data, user engagement events, employee performance, operational systems and product analytics

Core Competencies: ETL pipeline development, dashboard design & reporting, stakeholder communication and data centralisation
